I. Introduction

On August 10, 2005, President George W. Bush signed into law the Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (Pub. L. 109–59, § 1(a), Aug. 10, 2005, 119 Stat. 1144; SAFETEA–LU). SAFETEA–LU established a new core Highway Safety Improvement Program (HSIP) to achieve a significant reduction in traffic fatalities and serious injuries on all public roads. A provision of the HSIP requires every state to submit an annual report describing not less than 5 percent of its public roadway locations exhibiting the most severe safety needs to the Federal Highway Administration (FHWA) by August 31 of each year (23 U.S.C. § 148(c)(1)(D)). The “2010 California Highway Safety Improvement Program 5 Percent Report” (Report) satisfies the HSIP SAFETEA–LU requirements and complies with FHWA guidance.

II. Purpose

This Report begins the investigative process and is not intended to be used as a tool for the allocation of funding for, or prioritization of, public roadway safety projects.

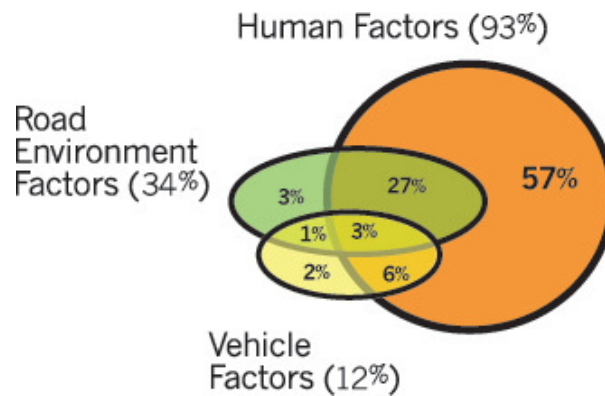

The purpose of this Report is to:

1. Satisfy the HSIP reporting requirement. This Report is one of four reports required by SAFETEA–LU for California to receive its full apportionment of federal HSIP funding. In addition, the development of an approved Strategic Highway Safety Plan (SHSP) is required.
2. Raise public awareness of the safety needs and challenges in California. In accordance with SAFETEA–LU, the U.S. Department of Transportation promotes public awareness by posting the approved Report for California, and other states’ annual reports, on the FHWA’s Web site.

III. Collision Factors

The Venn diagram on the next page shows collisions resulting from one factor or a combination of two or three factors: the vehicle, the driver, and the road. For example, the “Interactive Highway Safety Design Module: Accident Predictive Module” report indicates that a collision may result from faulty brakes, an impaired driver, or a curve that is too tight for the prevailing speed.¹ Nationwide, 12 percent of all collisions involve some factor of the vehicle traveling the roadway, 34 percent involve some characteristic of the roadway, and 93 percent involve human factors. Of the total collisions represented by this figure, 57 percent involve human factors alone, 3 percent involve roadway environmental factors alone, 2 percent involve vehicle factors alone, and 37 percent involve a combination of these factors. (The numbers do not add up to 100 percent because of rounding.) This information shows the importance of focusing on the three factors that can occur in every collision in order to develop safety improvement strategies in engineering, education, enforcement, and emergency medical services.

¹ Harry Lum and Jerry A. Reagan, *Public Roads*, Vol. 59, No. 2, Winter 1995, <<http://www.fhwa.dot.gov/publications/publicroads/95winter/p95wi14.cfm>>, accessed on July 20, 2010.

IV. California Roadway Data

Table 1 shows California's most recent and currently available roadway information segmented by city streets, county roads, and State highways (roadways maintained by the California Department of Transportation [Caltrans]). City streets and county roads have similar lengths of maintained miles and lane miles; however, city streets carry more traffic than county roads. A review of the State Highway System (SHS) reveals that, even though the SHS constitutes fewer maintained miles and lane miles than city and county roads, the SHS carries the majority of vehicle miles traveled (VMT) in California.²

Roadway	Total Maintained Miles	% of Total Maintained Miles	Lane Miles	Total Annual VMT (in Millions)	% of Total Annual VMT
City Streets	74,739	48	168,646	114,791	35
County Roads	65,344	42	133,145	32,023	10
Subtotal: City Streets plus County Roads	140,083	90	301,791	146,814	45
State Highway System	15,204	10	50,542	178,198	55
Total	155,287	100	352,333	325,012	100

² "2008 California Public Road Data: Statistical Information Derived From the Highway Performance Monitoring System," State of California Department of Transportation—Division of Transportation System Information, December 2009, p. 4.

V. Methodology

Two different methodologies, one for the SHS and another for local streets and roads, were used for identifying the top 5 percent locations included in this Report. These methodologies are described below.

State Method

For the purpose of this Report, Caltrans used the SHS location information from its Traffic Accident Surveillance and Analysis System (TASAS) Table C Report, which generates a list of high-collision-concentration locations requiring traffic safety investigation. The TASAS Table C Report provides information for the 36-month period from January 1, 2006, through December 31, 2008. It considers collisions for 3-, 6-, 12-, 24-, and 36-month periods; traffic volumes; collision rates; average collision rates; and roadway types. The locations on the TASAS Table C Report were sorted into three lists: roadway segments (0.2-mile segments), intersections (each intersection location includes 250 feet on all approaches), and ramps (each ramp location includes entry, exit, and body of ramp). For each of these lists, the top 2.5 percent locations by fatal and injury collision rates and the top 2.5 percent locations by the number of fatal and injury collisions were identified. Combined, these figures comprise the 5 percent SHS locations for this Report. (No highway segments, intersections, or ramp locations were identified by both fatal and injury collision rates and the number of fatal and injury collisions.) The results (102 locations) are shown in Appendix A.

Local Method

The California Highway Patrol's Statewide Integrated Traffic Records System was used to obtain collision information for identifying locations on local streets and roads for this Report. The local streets and roads were divided into 0.5-mile segments within each county, resulting in a total of 280,166 segments. Collision concentrations were determined for segments on which at least one fatal or severe injury collision occurred from 2006 through 2008, with the assumption that these areas could have potential safety needs. There were 17,535 segments identified and sorted to generate lists by county. Each county list was sorted from high to low by the number of fatal or severe injury collisions for each segment. Following that, the top 5 percent segments for each of these county lists were identified. Segments with at least three or more fatal or severe injury collisions were included in this Report as locations. The results (870 locations) are shown in Appendix B.

VI. Remedies, Impediments to Implementation, and Cost

The Venn diagram on page 2 graphically shows how the roadway, the driver, and the vehicle are all involved in fatal, injury, and property-damage-only collisions. Efforts to improve safety on the SHS and local streets and roads must continue to incorporate engineering, education, enforcement, and emergency services countermeasures and strategies. California's SHSP establishes statewide goals, objectives, and strategies to address the State's safety needs on the SHS and local roadways. California's SHSP identifies key safety challenge areas and includes the most effective strategies, countermeasures, and actions from these challenge areas to meet the State's safety needs. Implementation of SHSP actions is ongoing and will continue

for the duration of SAFETEA–LU. For more information about the SHSP, please visit www.dot.ca.gov/SHSP/.

In its annual HSIP report to the FHWA for fiscal year 2009–2010, Caltrans reported that it awarded \$122.2 million of State and federal money to safety projects. The projects consisted of intersection improvements, roadway and structure improvements, roadside improvements, signs, beacons, rumble strips, and barriers.

The California Office of Traffic Safety reported to the FHWA in its Highway Safety Plan for federal fiscal year 2010 that California’s planned fund distribution for all active grants totaled more than \$95 million for the following program areas: alcohol and other drugs, emergency medical services, motorcycle safety, occupant protection, pedestrian and bicycle safety, planning and administration, police traffic services, roadway safety, and traffic records.

VII. Discovery and Admission into Evidence

As stated in title 23 United States Code section 148(g)(4):

DISCOVERY AND ADMISSION INTO EVIDENCE OF CERTAIN REPORTS, SURVEYS, AND INFORMATION.—Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose directly relating to paragraph (1) or subsection (c)(1)(D), or published by the Secretary in accordance with paragraph (3), shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in such reports, surveys, schedules, lists, or other data.

The information in this Report is also protected by title 23 United States Code section 409, “Discovery and admission as evidence of certain reports and surveys.”

Appendix A. 5 Percent Locations, State Highway System

Contact

For questions regarding an SHS location, please contact Caltrans' Public Information Office at (916) 654-5782.

A1: Roadway Segment Locations

Summary

Table 2 on the following pages displays information for 63 roadway segment locations on the SHS from 22 counties in California. The 63 roadway segment locations represent 5 percent of all roadway segment locations identified by the TASAS Table C Report as discussed in the body of this Report.

How to Read the Table

The locations in Table 2 are sorted alphabetically by county, ascending by route, and ascending by post mile. The table displays location information in the following columns:

1. County: The California county where the roadway is located.
2. Route: The SHS Route number.
3. Post Mile: Caltrans uses a post mile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound.

Example Roadway Segment Location

County	Route	Location (0.2-Mile Segment With Beginning Post Mile)
Alameda	80	001.963 to 002.163 West

This is a 0.2-mile roadway segment along westbound Interstate 80 in Alameda County, which goes from 1.963 miles east of the western Alameda County line to 2.163 miles east of the western Alameda County line.

Discovery and Admission into Evidence

Please refer to Section VII, page 4.

Appendix A

Table 2. CALIFORNIA STATE HIGHWAY SYSTEM ROADWAY SEGMENT LOCATIONS		
County	Route	Location (0.2-Mile Segment With Beginning Post Mile)
Alameda	80	001.963 to 002.163 West
Alameda	80	005.730 to 005.930 West
Alameda	580	020.075 to 020.275 West
Alameda	880	016.566 to 016.766 South

Los Angeles	405	031.525 to 031.725 South
Los Angeles	605	R008.389 to R008.589 North
Los Angeles	605	R010.369 to R010.569 South
Marin	101	012.010 to 012.210 South

Appendix A

Table 2. CALIFORNIA STATE HIGHWAY SYSTEM ROADWAY SEGMENT LOCATIONS		
County	Route	Location (0.2-Mile Segment With Beginning Post Mile)
Mariposa	140	R031.257 to 031.680 ³
Mendocino	20	021.537 to 021.737
Orange	5	030.823 to 031.023 South
Orange	5	031.023 to 031.223 South
Orange	22	R008.726 to R008.926 East
Orange	22	R009.271 to R009.471 East
Riverside	15	004.135 to 004.335 South
Sacramento	99	023.036 to 023.236 North
Sacramento	99	023.236 to 023.436 North
San Bernardino	10	012.910 to 013.110 East
San Bernardino	38	029.509 to 029.709
San Diego	76	036.997 to 037.197
San Diego	78	055.618 to 055.818
San Diego	79	046.108 to 046.308
San Francisco	101	003.301 to 003.501 South
San Mateo	84	007.245 to 007.445
San Mateo	84	010.067 to 010.267
San Mateo	84	013.819 to 014.019
Santa Clara	9	000.220 to 000.420
Santa Clara	9	000.800 to 001.000
Santa Clara	280	R002.914 to R003.114 South
Shasta	299	004.897 to 005.097
Tulare	198	039.237 to 039.437
Tuolumne	49	000.520 to 000.720
Ventura	33	016.568 to 016.768
Ventura	33	032.098 to 032.298

³ Because of an equation within this segment (R31.313 equates to 31.536), the length from R031.257 to 031.680 is 0.2 mile.

*Appendix A***A2: Intersection Locations****Summary**

Table 3 on the following page displays information for 23 intersection locations on the SHS from 12 different counties in California. The 23 intersection locations represent 5 percent of all intersection locations identified by the TASAS Table C Report as discussed in the body of this Report.

How to Read the Table

The locations in Table 3 are sorted alphabetically by county, ascending by route, and ascending by post mile.

The table displays location information in the following columns:

1. County: The California county where the intersection is located.
2. Route: The SHS route number.
3. Post Mile: Caltrans uses a post mile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound. In addition to the post mile information, the intersection cross street is listed to provide further detail.

Example Intersection Location

County	Route	Location ⁴ Post Mile
Humboldt	101	123.896 N Entrance Moseleys Motel

This is an intersection location along State Route 101 in Humboldt County, which is 123.896 miles north of the southern Humboldt County line and intersects with the north entrance to Moseleys Motel.

Discovery and Admission into Evidence

Please refer to Section VII, page 4.

⁴ By post mile, the intersection location includes the intersection and 250 feet into all approaches and departures. Ramps include entry, exit, and body of ramp.

Appendix A

Ventura	1	20.14 Vineyard Ave

*Appendix A***A3: Ramp Locations****Summary**

Table 4 on the following page displays the information for 16 ramp locations on the SHS from 10 different counties in California. The 16 ramp locations represent 5 percent of all ramp locations identified by the TASAS Table C Report as discussed in the body of this Report.

How to Read the Table

The locations in Table 4 are sorted alphabetically by county, ascending by route, and ascending by post mile.

The table displays location information in the following columns:

1. County: The California county where the ramp is located.
2. Route: The SHS Route number.
3. Post Mile: Caltrans uses a post mile marker system for SHS location identification. Beginning with each county's boundary, every roadway on the SHS starts at mile zero (0) and increases from south to north moving northbound and west to east moving eastbound. In addition to the post mile information, the ramp cross street is listed to provide further detail.

Example Ramp Location

County	Route	Location ⁴ Post Mile
El Dorado	50	R 3.412 WB Off-ramp

This is an off-ramp location along westbound State Route 50 in El Dorado County, which is about 3.412 miles east of the western El Dorado County line.

Discovery and Admission into Evidence

Please refer to Section VII, page 4.

Appendix B. 5 Percent Locations, Local Streets and Roads

Contacts

For questions regarding the method chosen for the local streets and roads portion of this Report, please contact the California State Association of Counties at (916) 327-7500 or the League of California Cities at (916) 658-8200. For questions regarding a particular local street or road location, please contact the public works department in the jurisdiction where the location exists.

Local Streets and Roads

Summary

Table 5 on the following pages displays information for 870 locations on local streets and roads. These 870 locations represent 5 percent of the locations identified and discussed in the body of this Report.

How to Read the Table

The locations in Table 5 are sorted by county. The table displays location information in the following columns:

1. No.: Location identification number.
2. County: The California county where the local street or road is located.
3. Primary: The name of the street or road for the location.
4. Secondary: The reference cross street or road intersecting the primary street or road.
5. From/To: The distance from the intersection of the primary and secondary street or road along the primary street or road defining the 0.5-mile segment. A “minus” means either south of or west of, depending on the direction of the street.

Example

No.	County	Primary	Secondary	From	To
1.	Alameda	International Blvd	38th Ave	-722	1918

This location is in Alameda County and is on International Boulevard; it begins 722 feet either south or west of 38th Avenue and ends 1,918 feet north or east of 38th Avenue.

Discovery and Admission into Evidence

Please refer to Section VII, page 4.
